

User Stories & Use Cases

Nfs Mental Health Platform

User Stories

ID	Actor	User Story
US1	User / Client	As a user, I want to create an account so that I can access mental health support services securely.
US2	User / Client	As a user, I want to log in using my credentials so that I can access my personal dashboard.
US3	User / Client	As a user, I want to book a 1-on-1 therapy session so that I can receive professional mental health support.
US4	User / Client	As a user, I want to choose between online and offline sessions so that I can select the option that suits me best.
US5	User / Client	As a user, I want to join group support sessions so that I can share experiences and feel supported by others.
US6	User / Client	As a user, I want to participate in group sessions using a nickname or avatar so that I can protect my identity.
US7	User / Client	As a user, I want to interact with an AI chatbot so that I can receive initial guidance and support.
US8	User / Client	As a user, I want to receive personalized recommendations so that I can find suitable sessions or support resources.
US9	User / Client	As a user, I want to track my mental well-being progress so that I can understand changes over time.
US10	Therapist	As a therapist, I want to view my booked sessions so that I can manage my schedule.
US11	Therapist	As a therapist, I want to communicate securely with users so that I can provide support while protecting privacy.
US12	Admin	As an admin, I want to manage users, therapists, sessions, and content so that the platform remains organized and safe.
US13	AI System	As an AI system, I need to store chatbot logs securely and anonymously so that the platform can improve AI performance without exposing sensitive data.

Use Cases

ID	Use Case	Actor	Goal	Preconditions	Main Flow	Alternative Flow	Postcondition
UC1	Register Account	User	Create a secure account on the platform	User is not registered	Open platform; click Sign Up; enter data; system validates data; account is created.	Email already exists: system shows an error message.	User account is created successfully.
UC2	Book Therapy Session	User	Book an individual therapy session	User is logged in	Open sessions; select therapist; choose date/time; choose online or offline; confirm booking.	Selected time unavailable: system asks user to choose another time.	Session is booked successfully.
UC3	Join Group Session	User	Participate in a group support session	User is logged in	Open group sessions; view available sessions; select a session; choose real name or nickname/avatar; join.	Session is full: system shows unavailable status.	User is added to the group session.
UC4	Interact with AI Chatbot	User	Receive initial mental health guidance	User is logged in or allowed to access chatbot	Open chatbot; send message; system processes message; chatbot returns relevant response; anonymized logs are stored if needed.	Unsafe or unclear request: chatbot suggests professional support or shows a disclaimer.	User receives guidance or recommendation.
UC5	Get Personalized Recommendation	User / AI System	Recommend suitable support options	User provides basic input or profile data	User answers questions or updates profile; system analyzes input; recommendation engine generates suggestions; user views suggestions.	Insufficient data: system asks for more input.	User receives valid recommendations.
UC6	Manage Users and Sessions	Admin	Manage platform users, therapists, sessions, and content	Admin is logged in	Open dashboard; view users, therapists, and sessions; add, update, or remove records; system saves changes.	No permission: access is denied.	Platform data is updated successfully.
UC7	Manage Therapist Schedule	Therapist	View and manage booked sessions	Therapist is logged in	Open dashboard; view upcoming sessions; check session details; update session status if needed.	No sessions exist: system shows an empty schedule.	Therapist can manage appointments.
